Dear Hiring Manager:

I am writing to express my excitement and interest in this Data Analysis Internship opportunity. As a freshman Mathematics/Physics major currently enrolled in Statistical Machine Learning and who recently took Data Manipulation and Visualization, this job stands out to me because of the importance and application of presenting data in a way that anyone can understand. I am excited to get a deeper look into how data analysis is applied in the workforce.

I believe that my background will allow me to be an important part of your team. Throughout my classes this year including Multiple Regression Analysis, Data Manipulation and Visualization, and Statistical Machine Learning, I have become well-adept at approaching new problems from a scientific, creative approach. During multiple projects, I learned many different ways of visualizing data and I am excited for the opportunity to expand my knowledge.

My internship with the City of Gresham gave me practical experience in a team setting and dealing with real-world data. Using a visual app, I tracked hundreds of different data points in the field. Finally, my experience in AP Research last year taught me the importance of combining both technical research/data skills with clear, proper communication to present findings to anyone interested in the information. I think that these skills will be perfect for your team because of my combination of technical skills like Python's plotting packages and the critical thinking skills from a liberal arts education.

Thank you for considering my position as a freshman with success in advanced statistical courses so far. I look forward to discussing how I can contribute to this internship from a perspective of someone who is always learning and seeks to improve.

Best regards,

Alex Emert
